

# Powder Coating

Powder coating is an extremely durable, uniform, epoxy based coating that is baked onto metal in our large 8' x 8' x 16' oven. We have hundreds of colors and textures from which to choose. Prime has more than ten years experience powder coating wheels, chassis, frames, furniture, gates, rails, motorcycles, bicycles and many other items.

Please inquire about our convenient one day wheel service which includes tire dismount, remount and balance.

# Sandblasting

Sandblasting, through which rust and/or old paint can be removed, is a necessary step to properly prepare a metal surface for powder coating. We often sandblast car bodies for local automotive refinishers and classic auto restoration projects. Contractors and furniture designers also bring raw lumber in for blasting, resulting in a raised wood grain with an aged look. Generally speaking, sandblasting can be a helpful tool to any customer who needs to quickly strip and prep a surface to be sealed.

## Our History

Prime Fabrication was established in 2001 by its owner/operator, Trevor Streech. Prime began as a fabricator for the marine industry, producing rails, T-tops, tuna towers and other polished stainless items on yachts. Within a few years, Prime expanded its fabricating repertoire to include homes and high-end retail locations throughout LA & Orange Counties. Prime also added a powder coating and sandblasting line to provide its customer base a one-stop shop for their metal projects, big and small. Most recently, in 2011, Prime became a licensed structural steel contractor focusing on custom homes in coastal areas of Orange County. The ability to meet all our clients' metal needs and a history of excellent customer service has led to our continuous expansion and success.

## Specialties

Our team is highly skilled in metal fabrication and installation including but not limited to: structural steel construction, marine and architectural stainless, aluminum, and tube bending. Projects requiring the following are all satisfied by our in-house team: media treatment via sandblasting and powder coating & welding by TIG, MIG, stick and flux core. We outsource sheet metal, water jet and laser cutting detail work.

# Structural

Prime's structural steel department is a professional, efficient and experienced team. Most of the work we perform is on residences in the coastal areas of Orange County. We work with prestigious contractors and have established an excellent reputation in the construction business. Prime Fabrication is C51 licensed and bonded with all requisite insurance.

# Architectural

In late 2008 at the peak of the recession, Prime Fabrication expanded its interest in custom architectural jobs from residential to include commercial venues as well. This was a simple and successful transition. Since then, we have completed many high end projects in the L.A. metro area, including custom work for the Andaz West Hollywood Hotel, Topshop and Dolce & Gabbana. Our architectural department specializes in brushed and polished stainless handrails, guardrails & spiral staircases.

# Marine/Yacht

Marine fabrication is the foundation of our business and was the original inspiration behind Prime Fabrication. Trevor Streech, as the son of a lifelong waterman and yacht designer, inherited a passion for boating. He has extensive knowledge and appreciation for this specialized field of work. Trevor takes great pride in designing and crafting beautiful, high quality stainless marine fixtures. Rails, T-tops, towers, rod holders, transom name plates, and dingy chocks are just a few of the needs we have met for our boating clientele.
